InconOne - strategic IT partner for sustainable business growth

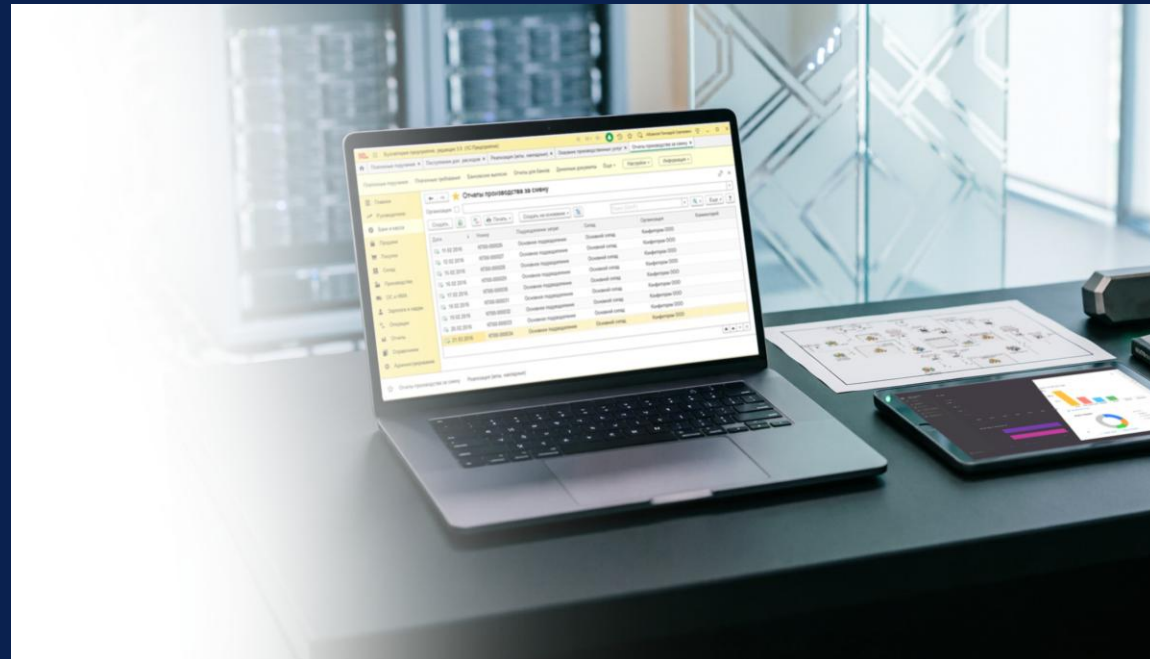

Module 1C Project Procurement

An additional functional module for 1C configurations designed to automate procurement by project, control estimates, monitor prices and track request statuses.

Module implementation goals

- automate work with construction project estimates
- create purchase requests based on estimates
- control and analyze procurement prices
- increase transparency of the procurement process
- reduce the risk of inflated prices and uncontrolled procurement
- keep procurement manageable at every stage

End-to-end project procurement process

- **Procurement is managed by project**
- **The estimate is the single planned procurement base**
- **Requests are created from the estimate**
- **Supplier selection and prices are recorded**
- **The contract and specification are linked to the specific purchase**

1

Procurement specialist workspace and procurement control

Procurement specialist workspace

- All requests and purchases in one window
- Current stage control
- Status management

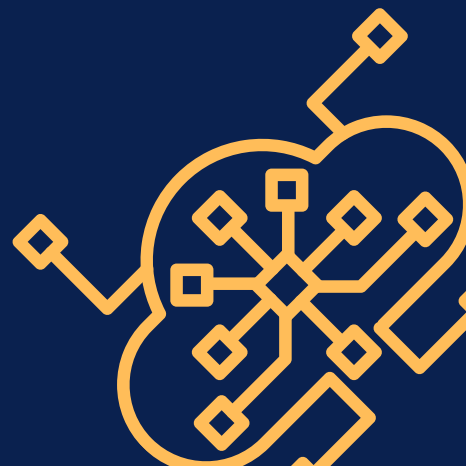

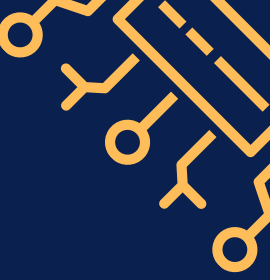

Supplier selection

- Price and terms comparison
- Decision recording and justification

Contract

- Contract + specification
- Linked to the project and purchase

Procurement remains transparent at every stage

Price and variance control

Management controls procurement costs and can respond quickly to variances

What we offer

- **module installation and setup**
- **adaptation to the current 1C configuration**
- **initial setup of directories and parameters**
- **functional testing**
- **production launch**
- **consultations for key users during implementation**
